

Corrido E

Lon-interface variable list

Covers all versions of Corrido E....-LON from revision 1.2-1-0

Revision: 8

Date: 11-08-19

©Copyright AB REGIN, Sweden, 2011

REGIN

THE CHALLENGER IN BUILDING AUTOMATION

About the manual

This document covers all versions of the LON-profiles. Certain variables are only available for later versions of the Corrigo software. These variables are marked with a number. Explanations are provided after each section. All variables are backward-compatible. New in this version: the profile for ventilation has been updated to version 3.1. See page 5.

Corrigo E Ventilation

Application files, CorrigoEVentilation.apb and CorrigoEVentilation.xif

The files CorrigoEVentilation.APB and CorrigoEVentilation.XIF are included in the E tool distribution.

E tool can be downloaded free of charge from Regin's website: www.regin.se.

After downloading and installing E tool, the files can be found in the folder:
Exo\Slib\Corrigo\VentilationProgram\Lon.

Use the file CorrigoEVentilationX_Y that corresponds to the revision in the Corrigo. The files CorrigoEVentilationX_Y-S should be used when the unit is marked -S.

Table of Network Variables, Outputs (NVO)

Name	SNVT_type	Description
nvoOutdoorTemp	SNVT_temp_p	Outdoor temperature
nvoSuppAirTemp	SNVT_temp_p	Supply air temperature
nvoExstAirTemp	SNVT_temp_p	Extract air temperature
nvoRoomTemp	SNVT_temp_p	Room temperature
nvoExtraSensor	SNVT_temp_p	Temperature, extra sensor
nvoSAFPressure	SNVT_press_p	Pressure, Supply air fan
nvoEAFPressure	SNVT_press_p	Pressure, Extract air fan
nvoSAFAirflow	SNVT_flow	Flow, Supply air fan (l/s)
nvoEAFAirflow	SNVT_flow	Flow, Extract air fan (l/s)
nvoDeicingTemp	SNVT_temp_p	Temp. De-icing sensor heat exchanger
nvoFrostProtTemp	SNVT_temp_p	Temp. Frost protection sensor
nvoCO2	SNVT_ppm	CO ₂
nvoRoomHumidity	SNVT_lev_precent	Room humidity
nvoRunIndication	SNVT_state	Bit0 – Run indication, Supply air fan Bit1 – Run indication, Extract air fan Bit2 – Run indication, Pump, heating Bit3 – De-icing heat exchanger active
nvoAo1	SNVT_volt_f	Output signal Ao1
nvoAo2	SNVT_volt_f	Output signal Ao2
nvoAo3	SNVT_volt_f	Output signal Ao3
nvoAo4	SNVT_volt_f	Output signal Ao4
nvoAo5	SNVT_volt_f	Output signal Ao5
nvoAo1Expl	SNVT_volt_f	Output signal Ao1 Expansion unit I (6)
nvoAo2Expl	SNVT_volt_f	Output signal Ao2 Expansion unit I (6)
nvoAo3Expl	SNVT_volt_f	Output signal Ao3 Expansion unit I (6)
nvoAo4Expl	SNVT_volt_f	Output signal Ao4 Expansion unit I (6)
nvoAo5Expl	SNVT_volt_f	Output signal Ao5 Expansion unit I (6)
nvoDo	SNVT_state	Bit0 – Output signal Do1

Name	SNVT_type	Description
		Bit1 – Output signal Do2 Bit2 – Output signal Do3 Bit3 – Output signal Do4 Bit4 – Output signal Do5 Bit5 – Output signal Do6 Bit6 – Output signal Do7 Bit7 – Output signal Do1 Expansion unit I (6) Bit8 – Output signal Do2 Expansion unit I (6) Bit9 – Output signal Do3 Expansion unit I (6) Bit10 – Output signal Do4 Expansion unit I (6) Bit11 – Output signal Do5 Expansion unit I (6) Bit12 – Output signal Do6 Expansion unit I (6) Bit13 – Output signal Do7 Expansion unit I (6)
nvoVVXExchEffi	SNVT_lev_percent	Heat exchanger efficiency monitoring
nvoSetpoint	SNVT_temp_p	Setpoint, Supply air
nvoCascadeSetp	SNVT_temp_p	Setpoint cascade control. Depending on configuration (Room temp if room control is configured, Extract air temp if extract air control is configured)
nvoMaxLimit	SNVT_temp_p	Max limit Supply temperature
nvoMinLimit	SNVT_temp_p	Min limit Supply temperature
nvoAlarm	SNVT_state_64	Bit0 – Run error Supply air fan Bit1 – Run error Extract air fan Bit2 – Run error P1-Heating Bit3 – Run error P1-Cooling Bit4 – Run error P1-Exchanger Bit5 – Filter guard Bit6 – Flow guard Bit7 – External frost guard Bit8 – De-icing heat exchanger Bit9 – Fire alarm Bit10 – External stop Bit11 – External alarm Bit12 – Control error Supply air controller Bit13 – Not used Bit14 – High supply air temperature Bit15 – Low supply air temperature Bit16 – Supply air max limit active Bit17 – Supply air min limit active Bit18 – Too high room temperature Bit19 – Too low room temperature Bit20 – Too high extract air temperature Bit21 – Too low extract air temperature Bit22 – Overheating protection active Bit23 – Frost risk Bit24 – Frost protection active Bit25 – Low efficiency heat exchanger Bit26 – Sensor error Bit26 – Sensor error outdoor temperature (4) Bit27 – Analogue de-icing of heat exchanger active Bit28 – Rotation guard heat exchanger Bit29 – Fire damper is out of operation Bit30 – Control error Supply air fan Bit31 – Control error Extract air fan Bit32 – External operation Supply air fan Bit33 – External operation Extract air fan Bit34 – Manual running mode Bit35 – Manual operation Supply air controller

Name	SNVT_type	Description
nvoAlarm	SNVT_state_64	<p>Bit36 – Manual operation Supply air fan Bit37 – Manual operation SAF Frequency converter Bit38 – Manual operation Extract air fan Bit39 – Manual operation EAF Frequency converter Bit40 – Manual output Heating Bit41 – Manual output Exchanger Bit42 – Manual output Cooling Bit43 – Manual operation PI-Heating Bit44 – Manual operation PI-Cooling Bit45 – Manual operation PI-Exchanger Bit46 – Manual operation Fire damper Bit47 – Internal Battery error Bit48 – Sensor error Supply air temp (4) Bit49 – Sensor error Extract air temp (4) Bit50 – Sensor error Room temp 1 (4) Bit51 – Sensor error Room temp 2 (4) Bit52 – Sensor error Exhaust air temp (4) Bit53 – Sensor error Extra sensor (4) Bit54 – Sensor error SAF pressure (4) Bit55 – Sensor error EAF pressure (4) Bit56 – Sensor error De-icing temp (4) Bit57 – Sensor error Frost protection temp (4) Bit58 – Sensor error CO2 (4) Bit59 – Sensor error Humidity room (4) Bit60 – Sensor error Humidity duct (4)</p>
nvoRunMode	SNVT_state	<p>Binary 0 = Stop 1 = Starting up 2 = Starting half speed 3 = Starting full speed 4 = Alarm delay 5 = Normal operation 6 = Support control Heating 7 = Support control Cooling 8 = CO₂ control 9 = Free cooling 10 = Full speed stop 11 = Fan stop 12 = Fire run (5) 13 = Recirculation run (5) 14 = De-icing (5)</p>

Table of Network Variables, Inputs (NVI)

Name	SNVT_type	Description
nviOutdoorTemp	SNVT_temp_p	Outdoor temperature. Overrides signal from local sensor
nviRoomTemp	SNVT_temp_p	Room temperature. Overrides signal from local sensor
nviFullSpeedExt	SNVT_switch	Force to full speed (I)
nviExternalStop	SNVT_switch	External stop (I)
nviFireAlarm	SNVT_switch	Fire alarm (I)
nviSetPoint	SNVT_temp_p	Setpoint Supply air
nviCascadSetp	SNVT_temp_p	Setpoint cascade control. Depending on configuration (Room temp if room control is configured,

		Extract air temp if extract air control is configured)
nviMaxLimit	SNVT_temp_p	Max limit Supply air
nviMinLimit	SNVT_temp_p	Min limit Supply air
nviOccCmd	SNVT_occupancy	0 = The unit is forced to run at 1/1-speed (3) 1 = Shut down. Support control and free cooling not active . Frost protection active if configured 2 = Runs according to the built-in timer. Support control and free cooling active if configured 3 = Unit stopped. Support control and free cooling active if configured. Frost protection active if configured
nviSndHrtB	SNVT_time_sec	Heart Beat (0 = disable)
nviTempHyst	SNVT_temp_p	Hysteresis for variables of the type _temp_p (2)
nviCO2Hyst	SNVT_ppm	Hysteresis for variables of the type _ppm (CO_2) (2)
nviPercentHyst	SNVT_lev_percent	Hysteresis for variables of the type _lev_percent (2)
nviPresHyst	SNVT_press_p	Hysteresis for variables of the type _press_p (Pressure) (2)
nviAirFlowHyst	SNVT_flow_p	Hysteresis for variables of the type _flow_p (Air flow)(2)
nviVoltHyst	SNVT_volt_f	Hysteresis for variables of the type _volt_f (Ao) (2)
nviSFPresSetpNor	SNVT_press_p	Setpoint pressure supply air fan normal operation (5)
nviEFPresSetpNor	SNVT_press_p	Setpoint pressure extract air fan normal operation (5)
nviSFPresSetpRed	SNVT_press_p	Setpoint pressure supply air fan reduced operation (5)
nviEFPresSetpRed	SNVT_press_p	Setpoint pressure extract air fan reduced operation (5)
nviSFAirFlowSetpNor	SNVT_flow	Setpoint flow supply air fan normal operation (5)
nviEFAirFlowSetpNor	SNVT_flow	Setpoint flow extract air fan normal operation (5)
nviSFAirFlowSetpRed	SNVT_flow	Setpoint flow supply air fan reduced operation (5)
nviEFAirFlowSetpRed	SNVT_flow	Setpoint flow extract air fan reduced operation (5)
nviParaTransfer	SNVT_temp_p	Parallel displacement of the supply air setpoint at outdoor compensated supply air temperature control (6)

- (1) For these parameters it is possible to use both a local hard-wired digital input and the Lon parameter. Activation of either alternative will trigger the function. However, if a function has been set using the Lon network it must also be reset using the Lon network since the nvi input value cannot be reset locally.
- (2) The hysteresis variables have nothing to do with the control software in the controller. They are internal to the LON interface and are used for minimising the amount of communication in the LON network.
- (3) Only Corrido E version 1.8 or later. CorridoEVentilation1_8.APB and CorridoEVentilation1_8.xif are also required.
- (4) Only Corrido E version 2.1 or later. CorridoEVentilation2_1.APB and CorridoEVentilation2_1.xif are also required.
- (5) Only Corrido E version 3.0 or later. CorridoEVentilation3_0.APB and CorridoEVentilation3_0.xif are also required. The flow variables are given in l/s, i.e. you divide the value by 3.6 to convert it to m³/h.
- (6) Only Corrido E version 3.1 or later. CorridoEVentilation3_1.APB and CorridoEVentilation3_1.xif are also required.

Corrido E Heating

Application files, CorridoEHeating.apb and CorridoEHeating.xif

The files CorridoEHeating.APB and CorridoEHeating.XIF are included in the E tool distribution.

E tool can be downloaded free of charge from Regin's website: www.regin.se.

After downloading and installing E tool, the files can be found in the folder:

Exo\Slib\Corrido\HeatingProgram\Lon.

Use the file CorridoEHeatingX_Y that corresponds to the revision in the Corrido. The files CorridoEHeatingX_Y-S should be used when the unit is marked -S.

The first time a Corrido E Heating controller is used in a LON network, the application file CorridoEHeating.apb must be loaded to the Corrido E.

Use Echelon LonMaker (or any other LON network program that can download application software to a LON device).

Table of Network Variables, Outputs (NVO)

Name	SNVT_type	Description
nvoHS1SupplyTemp	SNVT_temp_p	Actual value, Supply temperature HS1
nvoHS2SupplyTemp	SNVT_temp_p	Actual value, Supply temperature HS2
nvoHS3SupplyTemp	SNVT_temp_p	Actual value, Supply temperature HS3
nvoHS1SupplySetp	SNVT_temp_p	Setpoint, Supply temperature HS1
nvoHS2SupplySetp	SNVT_temp_p	Setpoint, Supply temperature HS2
nvoHS3SupplySetp	SNVT_temp_p	Setpoint, Supply temperature HS3
nvoOutdoorTemp	SNVT_temp_p	Outdoor temperature
nvoHS1RoomTemp	SNVT_temp_p	Room temperature HS1
nvoHS2RoomTemp	SNVT_temp_p	Room temperature HS2
nvoHS3RoomTemp	SNVT_temp_p	Room temperature HS3
nvoHW1SupplyTemp	SNVT_temp_p	Actual value, Supply temperature HW1
nvoHW2SupplyTemp	SNVT_temp_p	Actual value, Supply temperature HW2
nvoHW1SupplySetp	SNVT_temp_p	Setpoint, Supply temperature HW1
nvoHW2SupplySetp	SNVT_temp_p	Setpoint, Supply temperature HW2
nvoHP1SupplyTemp	SNVT_temp_p	Storage tank, Supply temperature
nvoHP1StartTemp	SNVT_temp_p	Storage tank, Start temperature
nvoHP1StopTemp	SNVT_temp_p	Storage tank, Stop temperature
nvoBoilerTemp	SNVT_temp_p	Boiler temperature, Actual value
nvoBoilStartTmp1	SNVT_temp_p	Boiler, Start temperature 1
nvoBoilStartTmp2	SNVT_temp_p	Boiler, Start temperature 2
nvoBoilerStopTmp	SNVT_temp_p	Boiler, Stop temperature
nvoWindSpeed	SNVT_speed	Wind speed
nvoDP	SNVT_press_f	Differential pressure
nvoDPSetp	SNVT_press_f	Setpoint, Differential pressure
nvoVolume	SNVT_vol_kilo	Volume, Hot water
nvoCW1Volume	SNVT_vol_kilo	Volume, Cold water 1
nvoCW2Volume	SNVT_vol_kilo	Volume, Cold water 2
nvoAo1	SNVT_volt_f	Output signal Ao1
nvoAo2	SNVT_volt_f	Output signal Ao2
nvoAo3	SNVT_volt_f	Output signal Ao3
nvoAo4	SNVT_volt_f	Output signal Ao4
nvoAo5	SNVT_volt_f	Output signal Ao5

Name	SNVT_type	Description
nvoRunInd	SNVT_state	<p>Bit0 – HS1-PIA Run indication Bit1 – HS1-PIB Run indication Bit2 – HS2-PIA Run indication Bit3 – HS2-PIB Run indication Bit4 – HS3-PIA Run indication Bit5 – HS3-PIB Run indication Bit6 – HW1-PI Run indication Bit7 – HWB-PI Run indication Bit8 – Frequency converter Run indication Bits9...15 not used</p>
