# *Chapter 1 Corigo with EXOline, Modbus and BACnet communication*

---

## **Introduction**

Corigo ventilation is a pre-programmed application for control of an air handling unit. The Corigo controller can be used either stand-alone or integrated in an existing EXO project. In both cases, it is configured via the display or by using the configuration tool E tool® on a PC.

This document describes all signals that are accessible via EXOline, Modbus and BACnet. It does not describe how to create an EXO project.

## **Signal types**

All signals accessible from a SCADA system are described further in this document. Signals with a default value are settings that can be changed via a SCADA system. Signals without a default value are actual values which cannot be changed using a SCADA system.

**NOTE:** In this manual, the term "Exhaust air" is used to describe the air extracted from inside of a building. The term "Extract air" is used to describe the air leaving a ventilation system.

### **EXOL type**

The EXOL type of the signals:

R = Real (-3.3E38 - 3.3E38)

I = Integer (-32768 - 32767)

X = Index (0 - 255)

L = Logic (0/1)

### **Modbus type**

The Modbus type of the signals:

1 = Coil Status Register (Modbus function = 1, 5 and 15)

2 = Input Status Register (Modbus function = 2)

3 = Holding Register (Modbus function = 3, 6 and 16)

4 = Input Register (Modbus function = 4)

Supported Modbus functions:

1 = Read Coils

2 = Read Discrete Input

3 = Read Holding Register

4 = Read Input Register

5 = Write Single Coil

6 = Write Single Register

15 = Write Multiple Coils

16 = Write Multiple Registers

## BACnet communication

Corrigo is capable of communication via the BACnet protocol, using either IP or MS/TP data link formats. In order to connect a Corrigo running a ventilation application to a BAS (Building Automation System) via BACnet/IP, a third generation Corrigo with a TCP/IP port is required. To connect to a BAS via BACnet MS/TP, a third generation Corrigo with a second RS485 communication port is required.

### BACnet type

The BACnet type of signals:

10XXX = Read and write binary

20XXX = Read binary

30XXX = Read and write analogue

40XXX = Read analogue

30XXX = Read and write multistate

40XXX = Read multistate

(Where XXX = Modbus address)

**NOTE:** In the variable lists contained in this manual, the following abbreviations are used:

**AV** = Analogue Value

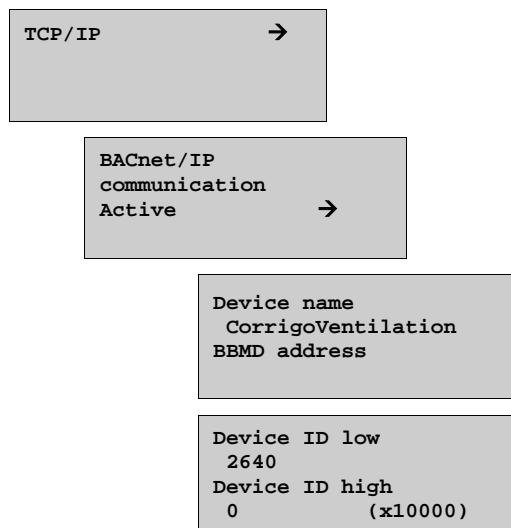

**BV** = Binary Value

**MSV** = Multistate Value

BACnet object names are the same as for EXOL type objects, but are shortened by removing the preamble “Cor\_” (e.g.: “**VentSettings.Cor\_OverHeatFastStop**” becomes “**VentSettings.OverHeatFastStop**”, etc.).

## BACnet/IP configuration

Upon delivery, the BACnet/IP protocol is disabled as a default. To enable BACnet communication, simply change the setting “Not active” to “Active”. The protocol will now be available for use:

### Device name

This is the devices name that is shown on the BAS when a device is discovered.

## BBMD address

The BBMD address (BACnet/IP Broadcast Management Device) is used for discovering devices that are attached to different BACnet/IP subnets and separated by an IP router. The address is entered as **host:port**, where “host” can be the host’s name if DNS is configured. If DNS is not configured, the host address should be entered in the format “xxx.xxx.xxx.xxx”, followed by the port number (default setting 47808).

**Example:** mybbmd:47808 (with DNS configured) or 10.100.50.99:47808

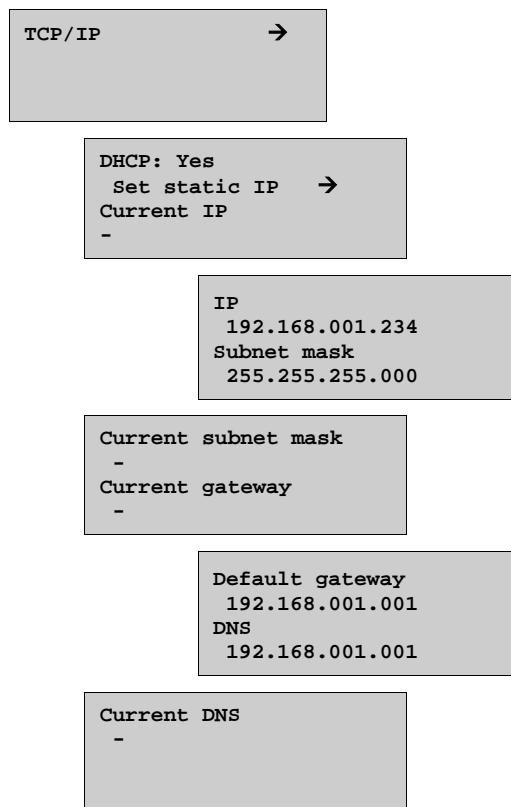

## Device ID

The ID of a device, used to identify it on the BACnet network. This number **cannot** be duplicated **anywhere** on the BACnet network and must therefore be unique. To set an ID value of 34600, the low number would be set to 4600 and the high number to 3.

## DHCP

The Dynamic Host Configuration Protocol (DHCP) is a network protocol used on Internet Protocol (IP) networks for dynamic distribution of network configuration parameters, such as IP addresses, DNS servers and other services. The Corrigo can be configured to either obtain an IP address from a DHCP server (dynamic) or the address can be set manually (static).

If you wish to set a static IP address for the Corrigo, simply enter the IP address you wish to use along with the subnet mask, gateway address and DNS server address:

## BACnet MS/TP Configuration

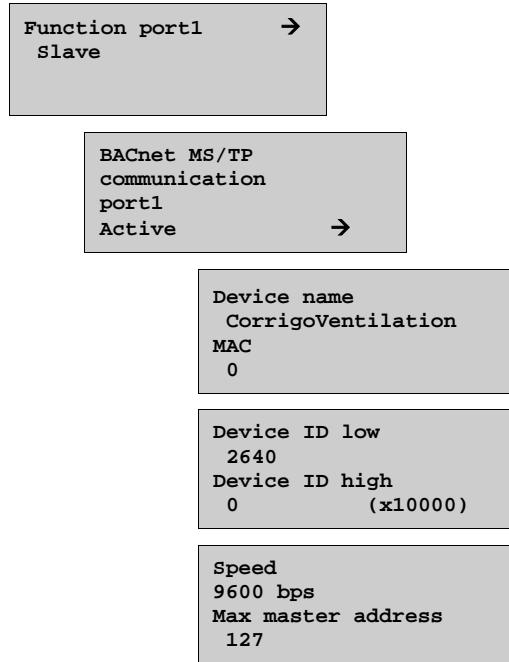

Upon delivery, the BACnet MS/TP protocol is disabled as a default. To enable BACnet communication, the function must first be activated. The default communication settings upon delivery are as follows:

Speed = 9600 bps

MAC address = 0

Device ID = 2640

Max Master = 127

### Device name

This is the name of the device, as shown on the BAS when discovering devices.

### MAC

The MAC address of the device. This needs to be unique only to the subnet to which the device is attached.

### Device ID

The ID of a device, used to identify it on the BACnet network. This number **cannot** be duplicated **anywhere** on the BACnet network and must therefore be unique. To set an ID value of 34600, the low number would be set to 4600 and the high number to 3.

### Speed

Sets the communication speed of the MS/TP network. This value is typically set to 38400 or 76800 but can be 9600, 19200, 38400 or 76800.

### Max master address

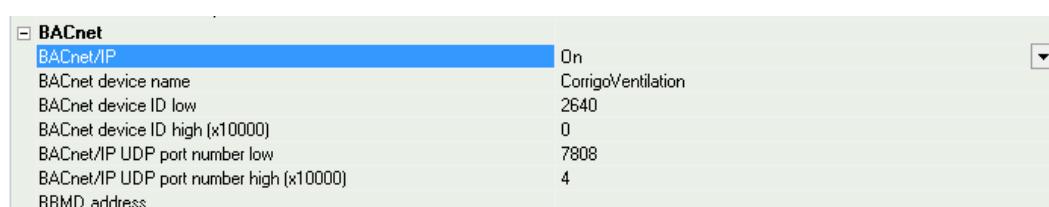

The max master is the MAC address of the highest master device on the BACnet MS/TP network segment. Setting this number above the highest MAC address will decrease network performance.

For additional information, see the Corrido PICS document, available via [www.regincontrols.com](http://www.regincontrols.com).

## BACnet in E tool<sup>©</sup>

### Addressing

The below picture illustrates the appearance of BACnet addressing in E tool<sup>©</sup>:

BACnet/IP = Activation status of BACnet/IP protocol.

BACnet device name = The name of the device.

The device ID is divided into two parts, one low and one high. For example: If the high part of the ID would be “1”, then the device ID above would be “00012640”.

BACnet device ID low = The lower part of the device identification.

BACnet device ID high (x10000) = The higher part of the device identification.

The port number is divided into two parts, one low and one high. For example: In the picture above, the port number is “47808”.

BACnet/IP UDP port number low = Port number, lower part.

BACnet/IP UDP port number high (x10000) = Port number, higher part. This is the dedicated communication port.

BBMD address = BACnet Broadcast Management Device address. This is used for communication over the Internet between devices running BACnet.

## Modbus

### Communication limitations

The Modbus master must wait for a minimum of 3.5 character times (4 ms at 9600 bps) between two messages.

### Scale factor Modbus

Real signals have scale factor 10, except for the time setting signals which have scale factor 100, and the air flow signals which have scale factor 1 for Modbus communication. Integer, Index and Logic always have scale factor 1.

### Modbus wiring, etc.

A protocol like Modbus consists of several layers (OSI-model). The bottom layer is always the physical layer; the number of wires and signal levels. The next layer describes the communication digits (number of data bits, stop-bits, parity etc.). Next are the layers describing the Modbus-specific functions (number of digits per message, the meaning of different messages, etc.).

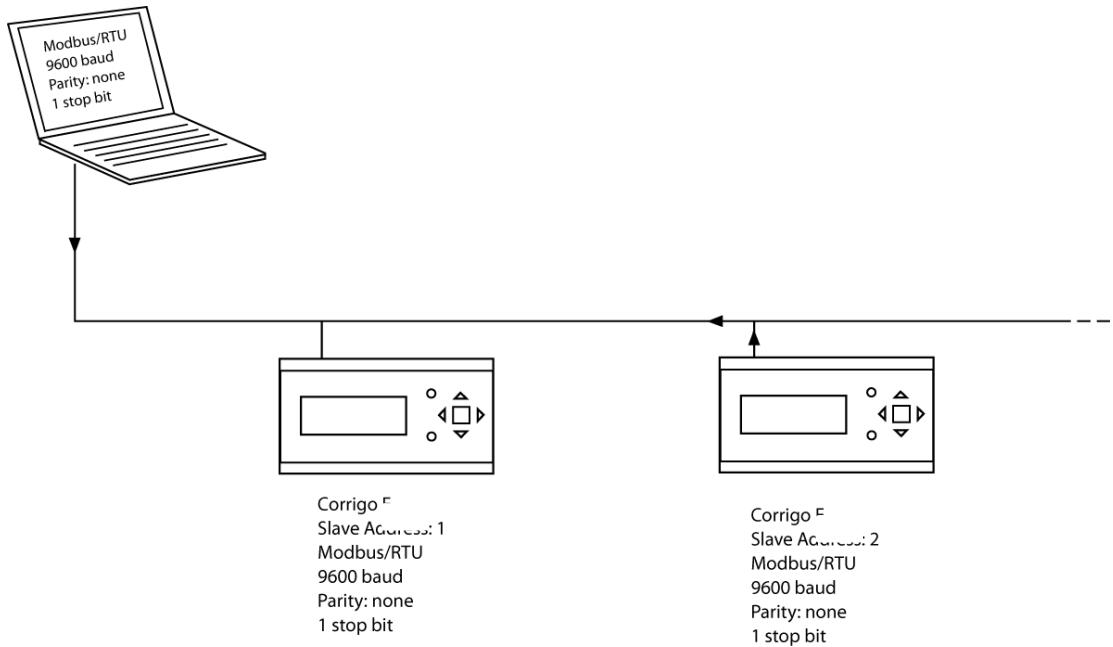

For Modbus, the bottom layer can be RS485, RS422, RS232 or Modbus TCP.

### Max. 47 registers

A maximum of 47 registers can be read in one message.

### Visualised example

The simplified example below visualises the Master/Slave relation. In addition to the figure, checksums for message validation are also transmitted in both query and answer.

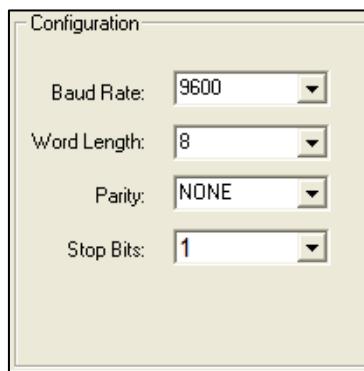

# Chapter 2 System integration using Modbus

---

## Configuration

The communication parameters for the Modbus line is the most important thing to configure first. As described earlier, these parameters must be identical in both the master unit and slave units, since they define the structure of messages and the transmission speed.

The default configuration values of a Corrigo controller are shown in the figure below.

Corrigo is set to Slave Address 1 as a default. If more units are added, a new Modbus address can be set for each unit using the Corrigo display or E tool<sup>®</sup>.

## Transmission mode

Corrigo uses the RTU transmission mode; not to be confused with the ASCII mode in the settings. The settings for the transmission mode must be the same in the master unit and the slave units, since Modbus/RTU cannot understand Modbus/ASCII messages. The configuration parameter Word length is always 8 for Modbus/RTU.

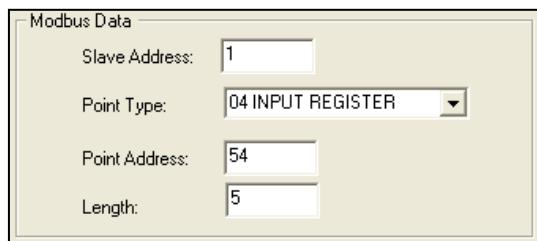

## Writing values

To override the Corrigo output values, set the output to manual mode using a Modbus signal. Then set the corresponding ...\_ManSet signal to the wanted level. These signals are listed in Chapter 5: Holding Registers. Remember that only values with a default value are adjustable, you will find these in the chapters Coil Status Register and Holding Register.

## Reading values

An effective way to read values is to read multiple variables simultaneously. To, for example, read all analogue outputs, set the Modbus query to the values shown in the figure below. The first analogue output variable starts at address 54 (QAnaOut.AQ1). To read address 54 to 58, set the length to 5. The Modbus answer will then communicate all 5 values in just one message, making the communication more effective.

# Chapter 3 Coil Status Register

---

<b>Signal name</b>	<b>EXOL type</b>	<b>Modbus address</b>	<b>BACnet</b>	<b>Default value</b>	<b>Function</b>	<b>Description</b>
VentSettings.Cor_OverHeatFastStop	L	1		0	Settings, General	Enable fast stop if overheat alarm
VentSettings.Cor_CoolStepAlarmBlock	L	2		0	Settings, General	Block cooling step signals if set and alarm "Run Error P1-Cooler"
VentSettings.Cor_AlaAcknowAll	L	3	BV, 10003	0	Settings, General	Command to acknowledge all alarms
VentSettings.Cor_AlaAcknowAll	L	3		0	Alarm Acknowledging, Blocking and Unblocking	Command to acknowledge all alarms
VentSettings.Cor_ReserveL	L	4		0	Settings, General	Not used
VentSettings.Cor_RecycleNightCool	L	5		0	Recirculation	Enable the night cool function when Recirculation run
VentSettings.Cor_RecycleExtraTimeGroup5	L	6		0	Recirculation	Use ExtraTimeGroup 5 to start Recirculation run
VentSettings.Cor_CompSAFOnly	L	7		0	SAF/EAF Pressure and Flow	Set only if SAF pressure should be compensated
VentSettings.Cor_NeedControl	L	8		0	Settings, General	Enable support control if the unit is shut down
VentSettings.Cor_DeIcingFunction	L	9		0	Extract air temp/De-icing exchanger	Enable the de-icing function
VentSettings.Cor_FilterAlarmReset	L	10		0	Settings, General	Resets the filter alarm counter
VentSettings.Cor_ReserveL	L	11		0	Settings, General	Not used
VentSettings.Cor_ReserveL	L	12		0	Settings, General	Not used
VentSettings.Cor_ReserveL	L	13		0	Settings, General	Not used
VentSettings.Cor_ReserveL	L	14		0	Settings, General	Not used
VentSettings.Cor_ReserveL	L	15		0	Settings, General	Not used
VentSettings.Cor_ReserveL	L	16		0	Settings, General	Not used

# Chapter 4 Input Register

---

<b>Signal name</b>	<b>EXOL type</b>	<b>Modbus address</b>	<b>BACnet</b>	<b>Default value</b>	<b>Function</b>	<b>Description</b>
VentActual.Cor_Outdoor temp(0)	R	1	AV, 40001		Actual/Setpoint	Outdoor temperature (read-only)
VentActual.Cor_Efficiency	R	2	AV, 40002		Actual/Setpoint	Efficiency in % for exchanger
VentActual.Cor_RunMode	X	3	MSV, 40003		Actual/Setpoint	Modbus: 0=Stopped 1=Starting up 2=Starting reduced speed 3=Starting full speed 4=Starting normal run 5=Normal run 6=Support control heating 7=Support control cooling 8=CO <sub>2</sub> run 9=Night cooling 10=Full speed stop 11=Stopping fan BACnet: 1=Stopped 2=Starting up 3=Starting reduced speed 4=Starting full speed 5=Starting normal run 6=Normal run 7=Support control heating 8=Support control cooling 9=CO <sub>2</sub> run 10=Night cooling 11=Full speed stop 12=Stopping fan
VentActual.Cor_SAFRunTime	R	4			Actual/Setpoint	Running time (hour) supply air fan
VentActual.Cor_EAFRunTime	R	5			Actual/Setpoint	Running time (hour) extract air fan
VentActual.Cor_ExtendedRunMin	I	6			Actual/Setpoint	Number of minutes extended operation
VentActual.Cor_SupplyAirTemp	R	7	AV, 40007		Supply, Extract and Room temperatures	Supply air temperature
VentActual.Cor_SupplyPID_SetP	R	8	AV, 40008		Supply, Extract and Room temperatures	Calculated setpoint supply air temperature when outdoor compensated control function
VentActual.Cor_ExtractAirTemp	R	9	AV, 40009		Supply, Extract and Room temperatures	Extract air temp
VentActual.Cor_RoomTemp1	R	10	AV, 40010		Supply, Extract and Room temperatures	Room temperature 1

<b>Signal name</b>	<b>EXOL type</b>	<b>Modbus address</b>	<b>BACnet</b>	<b>Default value</b>	<b>Function</b>	<b>Description</b>
VentActual.Cor_RoomTemp2	R	11			Supply, Extract and Room temperatures	Room temperature 2
VentActual.Cor_NeedRunTime	I	12			Supply, Extract and Room temperatures	Number of minutes in ongoing support heating/cooling
VentActual.Cor_SAFPressure	R	13	AV, 40013		SAF/EAF Pressure and Flow	Supply air fan pressure (Pa)
VentActual.Cor_EAFPressure	R	14	AV, 40014		SAF/EAF Pressure and Flow	Extract air fan pressure (Pa)
VentActual.Cor_SAFAirFlow	R	15	AV, 40015		SAF/EAF Pressure and Flow	Supply air fan flow ( $m^3/h$ ). Scale factor = 1
VentActual.Cor_EAFAirFlow	R	16	AV, 40016		SAF/EAF Pressure and Flow	Extract air fan flow ( $m^3/h$ ). Scale factor = 1
VentActual.Cor_CO2Sensor	R	17	AV, 40017		$CO_2$	$CO_2$ (ppm)
VentActual.Cor_DemandRunTime	I	18			$CO_2$	Number of minutes support run time $CO_2$
VentActual.Cor_FrostprotectionTemp	R	19	AV, 40019		Frost protection	Frost protection temp
VentActual.Cor_ExhaustAirTemp	R	20	AV, 40020		Extract air temp/De-icing exchanger	Exhaust air temp
VentActual.Cor_DeIcingTemp	R	21	AV, 40021		Extract air temp/De-icing exchanger	De-icing temp exchanger
VentActual.Cor_DeIcingTime	X	22			Extract air temp/De-icing exchanger	Number of minutes for ongoing de-icing
VentActual.Cor_HumidityRoom	R	23	AV, 40023		Humidity	Humidity room
VentActual.Cor_HumidityDuct	R	24	AV, 40024		Humidity	Humidity duct
VentActual.Cor_ExtraSensor	R	25	AV, 40025		Additional sensor/External setpoint (depending on configuration)	Extra sensor 1/External setpoint (depending on configuration)
VentActual.Cor_AnalogInput1(0)	R	26			Analogue inputs	The scaled and filtered value of AI1
VentActual.Cor_AnalogInput2	R	27			Analogue inputs	The scaled and filtered value of AI2
VentActual.Cor_AnalogInput3	R	28			Analogue inputs	The scaled and filtered value of AI3
VentActual.Cor_AnalogInput4	R	29			Analogue inputs	The scaled and filtered value of AI4
VentActual.Cor_AnalogInput5	R	30			Universal inputs	The scaled and filtered value of UAI1
VentActual.Cor_AnalogInput6	R	31			Universal inputs	The scaled and filtered value of UAI2
VentActual.Cor_AnalogInput7	R	32			Universal inputs	The scaled and filtered value of UAI3
VentActual.Cor_AnalogInput8	R	33			Universal inputs	The scaled and filtered value of UAI4

<b>Signal name</b>	<b>EXOL type</b>	<b>Modbus address</b>	<b>BACnet</b>	<b>Default value</b>	<b>Function</b>	<b>Description</b>
VentSettings.Cor_Ai1(0)	X	34			Analogue inputs	Connected signal on AI1: 0=Not used 1=Outdoor temp 2=Supplytemp 3=Extracttemp 4=Roomtemp1 5=Roomtemp2 6=Exhausttemp 7=Extrasensor 8=SAF pressure 9=EAF pressure 10=Deicingtemp 11=Frost prot.temp 12=CO <sub>2</sub> 13=Humidity room 14=Humidity duct 15=Extra unit temp 16=External SAF control 17=External EAF control 18=SAF pressure 2 19=Humidity outdoor

AlaData.Alapt113_Status	X	326			Alarm Status	Run error Motor control 2
AlaData.Alapt114_Status	X	327			Alarm Status	Motor control 1 external operation
AlaData.Alapt115_Status	X	328			Alarm Status	Motor control 2 external operation
VentActual.Cor_EfficiencyTemp	R	329	AV, 40329		Actual/Setpoint	Temperature efficiency sensor
VentActual.Cor_TemperatureOutput	R	330			Actual/Setpoint	This is an analogue output signal with a selectable temperature output; the selected temperature being presented here as 0....10 V
VentActual.Cor_TotalPower	R	331			Actual/Setpoint	Total calculated power consumption (kW)

# Chapter 5 Holding Register

---

Signal name	EXOL type	Modbus address	BACnet	Default value	Function	Description
VentSettings.Cor_Supply_Setpoint	R	1	AV, 30001	18°C	Supply, Extract and Room temperatures	Setpoint supply air temperature when constant supply air temperature function
VentSettings.Cor_Curve1_X1	R	2		-20°C	Supply, Extract and Room temperatures	Outdoor temp for first curve point for outdoor compensated setpoint
VentSettings.Cor_Curve1_X2	R	3		-15°C	Supply, Extract and Room temperatures	Outdoor temp for second curve point for outdoor compensated setpoint
VentSettings.Cor_Curve1_X3	R	4		-10°C	Supply, Extract and Room temperatures	Outdoor temp for third curve point for outdoor compensated setpoint
VentSettings.Cor_Curve1_X4	R	5		-5°C	Supply, Extract and Room temperatures	Outdoor temp for fourth curve point for outdoor compensated setpoint
VentSettings.Cor_Curve1_X5	R	6		0°C	Supply, Extract and Room temperatures	Outdoor temp for fifth curve point for outdoor compensated setpoint
VentSettings.Cor_Curve1_X6	R	7		5°C	Supply, Extract and Room temperatures	Outdoor temp for sixth curve point for outdoor compensated setpoint
VentSettings.Cor_Curve1_X7	R	8		10°C	Supply, Extract and Room temperatures	Outdoor temp for seventh curve point for outdoor compensated setpoint
VentSettings.Cor_Curve1_X8	R	9		15°C	Supply, Extract and Room temperatures	Outdoor temp for eighth curve point for outdoor compensated setpoint
VentSettings.Cor_Curve1_Y1	R	10		25°C	Supply, Extract and Room temperatures	Setpoint for first curve point for outdoor compensated setpoint
VentSettings.Cor_Curve1_Y2	R	11		24°C	Supply, Extract and Room temperatures	Setpoint for second curve point for outdoor compensated setpoint
VentSettings.Cor_Curve1_Y3	R	12		23°C	Supply, Extract and Room temperatures	Setpoint for third curve point for outdoor compensated setpoint
VentSettings.Cor_Curve1_Y4	R	13		23°C	Supply, Extract and Room temperatures	Setpoint for fourth curve point for outdoor compensated setpoint
VentSettings.Cor_Curve1_Y5	R	14		22°C	Supply, Extract and Room temperatures	Setpoint for fifth curve point for outdoor compensated setpoint
VentSettings.Cor_Curve1_Y6	R	15		20°C	Supply, Extract and Room temperatures	Setpoint for sixth curve point for outdoor compensated setpoint
VentSettings.Cor_Curve1_Y7	R	16		18°C	Supply, Extract and Room temperatures	Setpoint for seventh curve point for outdoor compensated setpoint
VentSettings.Cor_Curve1_Y8	R	17		18°C	Supply, Extract and Room temperatures	Setpoint for eight curve point for outdoor compensated setpoint
VentSettings.Cor_ExhaustSetpoint	R	18	AV, 30018	21°C	Supply, Extract and Room temperatures	Setpoint extract air temp if extract air temp control function

<b>Signal name</b>	<b>EXOL type</b>	<b>Modbus address</b>	<b>BACnet</b>	<b>Default value</b>	<b>Function</b>	<b>Description</b>
VentSettings.Cor_RoomSetP	R	19	AV, 30019	21°C	Supply, Extract and Room temperatures	Room setpoint if room temp control function
VentSettings.Cor_NeedHeatStart	R	20	AV, 30020	15°C	Supply, Extract and Room temperatures	Room temp for start the unit if intermittent heating control is active
VentSettings.Cor_NeedHeatStop	R	21	AV, 30021	21°C	Supply, Extract and Room temperatures	Room temp for stop the unit if intermittent heating control is active
VentSettings.Cor_NeedCoolStart	R	22	AV, 30022	30°C	Supply, Extract and Room temperatures	Room temp for start the unit if intermittent cooling control is active
VentSettings.Cor_NeedCoolStop	R	23	AV, 30023	28°C	Supply, Extract and Room temperatures	Room temp for stop the unit if intermittent cooling control is active
VentSettings.Cor_SAFFullspeedPressure	R	24	AV, 30024	500 Pa	SAF/EAF Pressure and Flow	Setpoint full speed supply air fan pressure
VentSettings.Cor_SAFHalfspeedPressure	R	25	AV, 30025	250 Pa	SAF/EAF Pressure and Flow	Setpoint reduced speed supply air fan pressure
VentSettings.Cor_EAFFullspeedPressure	R	26	AV, 30026	500 Pa	SAF/EAF Pressure and Flow	Setpoint full speed extract air fan pressure
VentSettings.Cor_EAFHalfspeedPressure	R	27	AV, 30027	250 Pa	SAF/EAF Pressure and Flow	Setpoint reduced speed extract air fan pressure
VentSettings.Cor_SAFFullspeedAirFlow	R	28	AV, 30028	2000 m³/h	SAF/EAF Pressure and Flow	Setpoint full speed supply air fan flow. Scale factor = 1
VentSettings.Cor_SAFHalfspeedAirFlow	R	29	AV, 30029	1000 m³/h	SAF/EAF Pressure and Flow	Setpoint reduced speed supply air fan flow. Scale factor = 1
VentSettings.Cor_EAFFullspeedAirFlow	R	30	AV, 30030	2000 m³/h	SAF/EAF Pressure and Flow	Setpoint full speed extract air fan flow. Scale factor = 1
VentSettings.Cor_EAFHalfspeedAirFlow	R	31	AV, 30031	1000 m³/h	SAF/EAF Pressure and Flow	Setpoint reduced speed extract air fan flow. Scale factor = 1
VentSettings.Cor_CO2Setpoint	R	32	AV, 30032	1000 ppm	CO <sub>2</sub>	Setpoint CO <sub>2</sub>
VentSettings.Cor_FrostProtSPStop	R	33	AV, 30033	25°C	Frost protection	Setpoint frost protection if the ventilation unit is stopped
VentSettings.Cor_FrostProtPGain	R	34	AV, 30034	5°C	Frost protection	P-Gain frost protection when running (alarm limit+PGain)
VentSettings.Cor_DeIcingSetpoint	R	35	AV, 30035	-3°C	Extract air temp/De-icing exchanger	Setpoint de-icing temp
VentSettings.Cor_DeIcingHyst	R	36	AV, 30036	1°C	Extract air temp/De-icing exchanger	Hysteresis for stop of de-icing
VentSettings.Cor_HumiditySetpoint	R	37	AV, 30037	50 % RH	Humidity	Setpoint humidity room
VentSettings.Cor_HumidityMaxDuct	R	38	AV, 30038	80 % RH	Humidity	Max limit humidity duct
VentSettings.Cor_HumidityHyst	R	39	AV, 30039	20 % RH	Humidity	Hysteresis to start humidity control after stop max limitation

# Chapter 7 Frequency converters and pressure transmitters

---

Version 3.4 of Corrigo ventilation supports the frequency converters listed below:

- Vacon NXL
- Lenze
- Omron V1000
- Emerson Commander
- LS
- EBM
- Danfoss FC 101
- ABB ACS
- EC Blue

When communicating via frequency converters through Modbus, it is sometimes necessary to change certain settings in the frequency converter.

Two parallel connected frequency converters for supply air and two parallel connected frequency converters for extract air can be run. The supply air fan will have address 1 and the parallel supply air fan address 3. The extract air fan will have address 2 and the parallel extract air fan address 4.

Below is described what settings are necessary in the various models:

## Vacon NXL

No settings necessary. Vacon NXL frequency converters are controlled via Modbus. Communication, alarms and certain indications can be read.

The following signals can be read/written from/to the frequency converter:

Address	Modbus register	Name	Scaling	Type
2003	32003, 42003	FB Speed reference (SP)	1000	%
2001	32001, 42001	FB Status word	-	Binary
11	30011, 40011	Acc. Motor output	1	kW
80	30080, 40080	Amount of decimals for Acc. Motor output	1	kWh
2103	32103, 42103	FB Motor speed	100	%
2105	32105, 42105	Motor speed	1	+/- Rpm
2106	32106, 42106	Current	100	A
2107	32107, 42107	Torque	10	+/- % (of nominal)
1501	31501, 41501	Output	1000	kW
2110	32110, 42110	DC voltage	1	V
2111	32111, 42111	Active error	-	Error code
2101	32101, 42101	FB Status word	-	Binär

The variables presented in the display of the Corrigo are:

Frequency (Hz), Current (A), Output (kW), Accumulated power (kWh).

## **Lenze**

No settings necessary.

Lenze frequency converters are controlled via Modbus. Communication, alarms and certain indications can be read.

The following signals can be read/written from/to the frequency converter:

Address	Modbus register	Name	Scaling	Type
49	32049, 42049	Password	-	-
50	32050, 42050	Parameter version	-	-
45	30045, 40045	FB Speed reference (SP)	50	%
2	30002, 40002	FB Status word	-	Binary
512	32512, 42512	Acc. Motor output	1	kW
528	32528, 42528	Motor frequency	10	Hz
509	32509, 42509	Current	1	A
511	32511, 42511	Output	1000	kW
506	31506, 41506	DC voltage	1	V
30	32110, 42110	Active error	-	Error code
27	32027, 42027	FB Status word	-	Binary

The variables presented in the display of the Corigo are:

Frequency (Hz), Current (A), Output (kW), Accumulated power (kWh).

## **Omron V1000**

**Connected via RS485:**

- R+ is connected to S+
- R- is connected to S-
- R+/S+ is connected to B on port 1 or 2
- R-/S- is connected to A on port 1 or 2

## **Parameters**

The following parameters must be set from the display of the frequency converter:

- H5-01 (0x425): Slave address, set to = 1 for Supply air fan and = 2 for Exhaust air fan
- H5-07 (0x42B): RTS Control, set to = 1 (enabled) for activation of RS485
- o1-03 (0x502): Frequency reference units, set to = 1 for 0-100%.
- H5-03 (0x427): Parity, set to = 0 (no parity)

Default values should be used for remaining parameters. The following values may not be changed:

- H5-02 (0x426): Communication speed, default =3 (9600)
- H5-04 (0x428): Stopping method after communication error, default = 3 (no stop)
- H5-11 (0x43C): Communication Enter Function, default=1 (Enter command not necessary)
- H5-12 (0x43D): Run command, default=0 (bit 0=forward start/stop, bit 1= reverse start/stop)
- b1-01 (0x180): Frequency Reference selection 1, default = 2 (via Modbus)
- b2-01 (0x181): Run command selection 1, default = 2 (via Modbus)

Omron frequency converters are controlled via Modbus. Communication, alarms and certain indications can be read.

The following signals can be read/written from/to the frequency converter:

Address	Modbus register	Name	Scaling	Type
3	30003, 40003	FB Speed reference (SP)	10	%
2	30002, 40002	Password	-	-
36	30036, 40036	Motor frequency	100	Hz
63	30063, 40063	Motor speed	1	+/- Rpm
39	30039, 40039	Current	10	A
40	30040, 40040	Output	10	kW
38	30038, 40038	DC voltage	10	V
33	30033, 40033	Status change	-	Binary
34	30034, 40034	Alarm	-	Binary
93	30093, 40093	Acc. Motor output	1	kWh

The variables presented in the display of the Corrigo are:

Frequency (Hz), Current (A), Output (kW), Accumulated power (kWh).

### Emerson Commander

#### Connections RS485-RJ45:

- RJ45:2 (orange) is connected to B on port 1 or 2
- RJ45:7 (white/brown) is connected to A on port 1 or 2
- Possible termination resistor is connected between RJ45:1 (white/orange) and RJ45:8 (brown).

If Modbus communication is not initialised after powering up, disconnect the termination resistor and try again.

#### Terminals

- Connect terminal B4 (Drive enabled) to B2 (+24V)
- Connect terminal B5 (Forward) to B2 (+24V)

#### Parameters

The following parameters must be set from the display of the frequency converter:

- 44: Slave address, set to = 1 (default) for Supply air fan and = 2 for Exhaust air fan
- 43: Baud rate: 9.6 (default: 19.2)
- Default values should be used for remaining parameters.

#### Changing parameters

- Deactivate the unit. The display should read "iH 0.0". This is performed by opening terminal B4.
- Set parameter 10 to "L3", i.e. all parameters up to and including 95 can then be altered.
- Set parameter 43 to 9.6 (9600 baud).

Emerson frequency converters are controlled via Modbus. Communication, alarms and certain indications can be read.

The following signals can be read/written from/to the frequency converter:

Address	Modbus register	Name	Scaling	Type
114	30114, 40114	Speed selection	-	-
18	30018, 40018	FB Speed reference (SP)	10	%
1038	31038, 41038	FB Status word	-	-
615	30615, 40615	Control switch	-	Binary
501	30501, 40501	Motor frequency	10	Hz
2	30002, 40002	Max speed	10	Hz
504	30504, 40504	Motor speed	1	+/- Rpm
402	30402, 40402	Current	10	A
503	30503, 40503	Output	10	kW
505	30505, 40505	DC voltage	1	V
1040	31040 41040	Status change	-	Binary

The variables presented in the display of the Corrigo are:

Frequency (Hz), Current (A), Output (kW), Accumulated power (kWh).

## LS

LS frequency converters are controlled via Modbus. Communication, alarms and certain indications can be read.

### LS iG5A

The following signals can be read/written from/to the frequency converter:

Address	Modbus register	Name	Scaling	Type
5	30005,40005	FB Speed reference (SP)	10	%
6	30006,40006	FB Status word	-	Binary
10	30010,40010	Motor frequency	100	Hz
31	30031,40031	Torque	100	%
21	30029,40029	RPM	1	Rpm
9	30009,40009	Motor current	10	A
13	30013,40013	Output	10	kW
12	30012,40012	Voltage	10	V
14	30014,40014	Status change	-	Binary
15	30015,40015	Alarm	-	Binary
29	30029,40029	Alarm 2	-	Binary

The variables presented in the display of the Corrigo are:

Frequency (Hz), Current (A), Output (kW), Accumulated power (kWh).

## LS iS7

The following signals can be read/written from/to the frequency converter:

Address	Modbus register	Name	Scaling	Type
5	30005,40005	FB Speed reference (SP)	10	%
6	30006,40006	FB Status word	-	Binary
10	30010,40010	Motor frequency	100	Hz
791	30791,40791	Torque	100	%
786	30786,40786	RPM	1	Rpm
784	30784,40784	Motor current	10	A
790	30790,40790	Output	10	kW
789	30789,40789	Voltage	10	V
14	30014,40014	Status change	-	Binary
816	30816,40816	Alarm	-	Binary
817	30817,40817	Alarm 2	-	Binary

## EBM-PAPST

EBM frequency converters are controlled via Modbus. Communication, alarms and certain indications can be read.

The following signals can be read/written from/to the frequency converter:

Address	Modbus register	Name	Scaling	Type
53250	30250,40250	FB Speed reference (SP)	640	%
53249	30249,40249	FB Control word	-	
53265	30265,40265	Torque		Rpm
53266	30226,40266	FB Status word	-	Binary
53267	30267,40267	Status change		Binary
53268	30268,40268	DC voltage		V
53269	30269,40269	Motor current		A

The variables presented in the display of the Corrido are:

Frequency (Hz), Current (A), Output (kW), Accumulated power (kWh).

## Danfoss FC 101

Danfoss frequency converters are controlled via Modbus. Communication, alarms and certain indications can be read.

The following signals can be read/written from/to the frequency converter:

Address	Modbus register	Name	Scaling	Type
3100	33100,43100	FB Speed reference (SP)	100	%
50000	350000,450000	FB Control word	-	
16130	316130,416130	Motor frequency	10	Hz
16140	316140,416140	Current	100	A
16100	316100,416100	Output	1000	kW
16300	316300,416300	DC voltage	1	V
16030	316030,416030	Status change	-	

The variables presented in the display of the Corrido are:

Frequency (Hz), Current (A), Output (kW), Accumulated power (kWh).

## **ECBlue**

ECBlue frequency converters are controlled via Modbus. Communication, alarms and certain indications can be read.

The following signals can be read/written from/to the frequency converter:

Address	Modbus register	Name	Scale	Type
3	30003,40003	FB Speed reference (SP)	1	%
5	30005,40005	FB Control word	-	0 = Off 3 = On
15	30015,40015	RPM		Rpm
16	30016,40016	Current	100	A
34	30034,40034	Output	1	kW
21	30021,40021	DC voltage	1	V
13	30013,40013	Alarm	-	Error code

REGIN - THE CHALLENGER IN BUILDING AUTOMATION
